

## **Something About Nothing**

(Music and Lyrics by Gary Huntbach)

We're gonna learn about nothin'  
By that I mean the digit zero  
It's not so small as it sounds..it goes round and round  
It can make any number grow and grow

Multiply any number by zero  
We end up with zero again  
Example 0 times 8 0 times 5  
equals nothing, which is zero again.

Look down look down on planet earth  
It's continents and oceans  
See people in boats and schools of fish  
Swimming beneath the waves

Wow, look at all the Fish  
The Fish are in school too

I'm gonna zero times a pirate/  
Zero times a shark  
Zero times the monsters I see!  
Don't multiply the googols by zero  
*But if you do that you'll learn nothin dude*

Put a zero after the number one  
Then one will become ten... Wow!  
Add a zero to ten makes one hundred you know  
But a zero times a hundred is a zero again

If one is followed by six zeros  
We get one million  
Add three more zeros.. to one million  
We get a billion... Hey that's too much

Look down look down on planet earth  
It's continents and oceans  
It looks like a Great big circle  
Exactly like a zero

We just learned about something  
We learned about the digit zero  
It's not so small as it sounds..it goes round and round  
It can make any number grow and grow

We just learned about something  
We just learned about nothing  
We just learned about something  
We just learned about nothing

I think we should learn about something, let's get back to Earth.
